TASK 4:

EXPLAIN IN ONE LINE:

1) How does TRUNCATE differ from DELETE?

- **TRUNCATE is a DDL command that quickly removes all rows from a table by deallocating the data pages (it cannot be rolled back in standard SQL), whereas DELETE is a DML command that removes rows one by one and logs each row deletion, allowing it to be rolled back.**

2) How does TRUNCATE differ from DROP?

- **TRUNCATE deletes all the data inside a table while keeping the table structure intact for future use, whereas DROP completely deletes both the table structure and its data from the database.**
